

MANAGED BACKUP

THE IMPORTANCE OF A SOUND DATA BACKUP STRATEGY

Business data and intellectual property has become the lifeblood of many businesses today. It goes without saying that you need to protect your vital business data.

Many companies don't give much thought to data backup until they suffer a catastrophic loss and often it is too late at this point.

Business owners quickly realize three things:

- All computer systems crash
- All humans error
- Disasters happen when least expected or are least prepared for them.

CLOUD BENEFITS

- Data is always available
- Data is always accessible
- Data is stored and transferred securely using 256-bit AES encryption.
- Data can be restored to virtual hardware in the event of fire or natural disaster.
- Archiving and versioning – store multiple versions of files automatically.
- Unlimited storage.

Backup and recovery software focused on keeping your business running in the event of unforeseen circumstances.

Features	Description
Server Backup	Designed to protect all your servers, virtual servers and critical applications from a single, cloud-based console. Pricing is simple and based on devices.
Workstation Backup	Backup for workstations protects entire workstations—quickly and easily to help reduce downtime. The central dashboard console provides site-wide deployment, status and alerts to keep you informed. Device-based pricing simplifies budgeting and offers affordable protection.
Document Backup	Backup Documents is purpose built to protect locally-stored business documents and eliminate customers' objections around the cost and complexity of backing up every one of their PCs.
Bare Metal Recovery	Restore from bare metal images in minutes. <ul style="list-style-type: none"> • Complete machine recovery • Full Windows compatibility • Physical to virtual recovery
Virtual Disaster Recovery	Be prepared for anything with automated system restores to Hyper-V® or VMware®. <ul style="list-style-type: none"> • Test your recovery images any time • Fast efficient protection • Continuous protection
Security-Focused Storage	Safe, Secure, Affordable Storage including: <ul style="list-style-type: none"> • Global Data Centers • Data stays in your region • Data encrypted end-to-end and at rest • AES 256-bit Encryption
