

Managed Patch

What is Patch Management?

Patch management is the process that helps acquire, test and install multiple patches (code changes) on existing applications and software tools on a computer, enabling systems to stay updated on existing patches and determining which patches are appropriate.

Why is patch management important?

Patches and updates are provided by software companies as part of their internal efforts to fix problems with the different versions of their software. Software patches help fix those problems that exist and are noticed only after the software's initial release. Patches mostly concern security while there are some patches that concern the specific functionality of programs.

Managed Patch: Key Features

- Remote deployment
- Windows Update patch management
- Integrations with SCCM
- Identify vulnerabilities
- Pre-built/pre-tested packages
- Patch compliance reports
- Patch status dashboard

Our intuitive patch management quickly identifies and remediates software vulnerabilities

Keeping your businesses safe requires constant vigilance—you need to keep all systems up to date with the latest software patches and updates or you can open your network to serious security risks. As the number of servers, workstations, laptops and tablets increases so does the complexity of maintaining them. Leaving it up to end users to maintain the latest Windows and 3rd party patches is just not an option.

With Cumulus Consulting, LLC's Managed Patch Service we take care of it all and provide reports at regular intervals to meet compliance requirements. Our Managed Patch Service provides granular control over your patch management policies allowing us to tailor a solution that is right for your business. With our patch management solution, you reduce the risk of cyberattacks and optimize system performance.

We Support More Software

- We support operating system updates as well as updates for multiple third-party software application families, including Adobe products, Java, and browsers.
- Exchange and Office 365 support: Stay current with all updates for Microsoft Windows and other Microsoft products—including Exchange and Office 365.
- Heightened security for vulnerable programs: Keep up to date with the latest security patches for commonly exploited products.
